

Year 8 Geography: GIS

Key terms

| | |
|--------------------|--|
| Anomaly | something that deviates from what is standard, normal, or expected |
| Coordinate | A point on a map |
| Data Layers | Platforms of information stacked on top of one another on a base of the real world. |
| GIS | A geographic information system (GIS) is a system designed to capture, store, manipulate, analyse, manage, and present all types of geographical data. |
| Intelligent data | Data which can be layered on maps |
| Matrix | A grid of squares |
| Exclusion zone | An area in which people are not allowed to enter |
| Vector Map | A map created using lines, areas and coordinates |
| Unintelligent data | Data which cannot be layered on maps |
| Trend | The general pattern of a map or data |
| Raster | A map produced using a matrix and coloured pixels |

Describing a Pattern from a G.I.S

WHERE IS THE MOST DANGEROUS PLACE TO LIVE ?

| | |
|-----------------------------|----------------------------|
| 1 West Yorkshire - 88.6 | 22 Warwickshire - 37.7 |
| 2 Cleveland - 82.4 | 23 Cambridgeshire - 37.5 |
| 3 Greater Manchester - 78.4 | 24 Leicestershire - 34.9 |
| 4 London - 75.6 | 25 West Mercia - 36 |
| 5 South Yorkshire - 73.8 | 26 North Wales - 32.8 |
| 6 Humberside - 72.9 | 27 Thames Valley - 32.3 |
| 7 Northumbria - 70.1 | 28 Suffolk - 32.2 |
| 8 Northamptonshire - 67.9 | 29 Dorset - 31.9 |
| 9 Avon and Somerset - 66.5 | 30 Hertfordshire - 31.9 |
| 10 Merseyside - 66.1 | 31 Sussex - 31.6 |
| 11 Lancashire - 66 | 32 Wiltshire - 30.8 |
| 12 West Midlands - 64.3 | 33 Norfolk - 47.5 |
| 13 Kent - 64.3 | 34 Cheshire - 47.6 |
| 14 Hampshire - 63.4 | 35 Derbyshire - 46.2 |
| 15 South Wales - 62.9 | 36 Cumbria - 45.4 |
| 16 Durham - 62 | 37 Lincolnshire - 44.8 |
| 17 Staffordshire - 60.7 | 38 Gloucestershire - 44.7 |
| 18 Nottinghamshire - 60.4 | 39 Surrey - 44 |
| 19 Gwent - 59.9 | 40 Devon & Cornwall - 41.7 |
| 20 Bedfordshire - 58.5 | 41 North Yorkshire - 40.7 |
| 21 Essex - 58.1 | 42 Dyfed-Powys - 36.6 |

KEY

- 80-90
- 70-80
- 60-70
- 50-60
- 40-50
- per 1,000 people

To **describe** a pattern from a map you need to remember T.E.A.

- T: Trend**
- E: Example**
- A: Anomaly** (something that doesn't fit the pattern)

Use TEA to describe the pattern of crime in Hartlepool

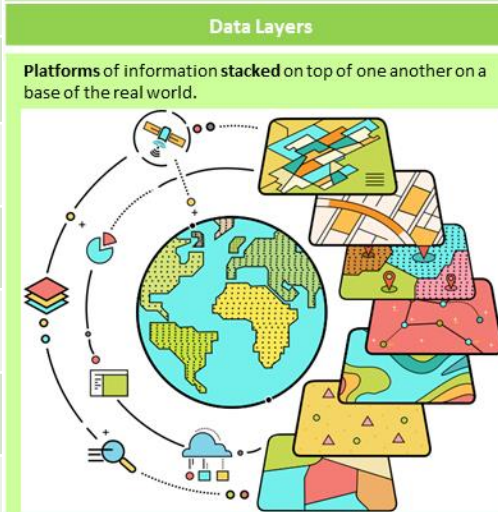

The figure indicates number of recorded crimes in March 2017

- T:** Describe generally what the pattern shows. Which areas of the country generally are at the most risk of crime. On the map above these areas are generally in the North of England. The south is less dangerous.
- E:** Give an example with data to illustrate your point, e.g. 'West Yorkshire has the highest crime rate of 88.6 crimes per thousand people & this is in the north'.
- A:** Find something that doesn't fit the pattern – can you see and low crime rates in the north of high crime rates in the south? e.g. an anomaly to this pattern is London which has 75.6 crimes per thousand people and is in the south of the country.

Who Would Use a GIS?

- How would someone planning a town of city use the information below?
- What would happen if they didn't have all of the data in the model – such as rivers?
- Why do you think the rock type might be important?
- How could this data help:
 - The police?
 - A taxi driver?
 - A factory owner?
 - A water company?
 - A house-building developer?
 - The Environmental Agency

What is GIS?

- GIS means **Geographical Information System** and refers to way in which data can be platted on a map.
- A Geographical Information System (GIS) is designed to **capture, analyse and present** all types of geographical data.
- In the simplest terms GIS is the merging of maps, numbers, data and technology.
- A **base layer** of the shape of the land can be **overlaid** by other **information** such as rivers, buildings, pipelines, vegetation and other information. This can then be used by geographers to understand events such as flooding, plan towns and cities and help companies locate where they will make the most profit.

The Geography of Disease: The first ever GIS!

- The first ever GIS was created and used in London in 1845.
- Cholera was killing hundreds of people in the city.
- The first death was at 40 Broad Street in London and within 3 days 127 people died.
- By 2 weeks 600 people were dead.
- A doctor called **John Snow** began investigating what was causing the disease.
- Dr Snow **plotted the deaths on a map** and the location of **water pumps** on a map.
- He noticed that deaths were **clustered** around a water pump in **Broad Street**.
- The handle was removed from the pump and the outbreak stopped.
